LICENCE TO DRILL II

THE TOUGHEST OF THE TOUGH ARE BACK AT WORK!

zdf.factual

Factual Series

6 x 50' HD

in total 12 x 50' HD

Facts for your success:

- »» The second season of sensational drill exploits in Canada's Far North
- »» Still fighting Arctic cold, monster storms and murderous deadlines
- »» Thrilling shots of spectacular landscapes and dangerous situations

LICENCE TO DRILL II

It's "always a war. It's always a race," says John Williams, field supervisor of MGM Energy, on drilling for black gold in the unforgiving Canadian North. Most of all, it's a race against melting rivers, breaking drill bits and inexperienced hotheads, and a war against resignation and the urge to quit when there's no oil at the bottom of a brand-new well.

Welcome to the second season of Nicola Merola's and Emanuelle Wiecha's "Licence to Drill," the factual reality series whose stars are a bunch of men – and a few women – who defy overwhelming odds in the hope of cracking that very spot that'll get the oil gushing. It's the lucky strike that pulls them back for more – and that can cost their companies up to \$250,000 a day. Last season, MGM Energy Corp. drilled for natural gas and struck it rich. In Season Two they're raising the stakes and gunning for an even bigger payoff: a well south of the Arctic Circle, in a region that has yet to be exploited. It's a \$20 million project that has to be completed fast. There's no margin to err here. Hundreds of kilometers south, in Alberta, Penn West Exploration is using a different strategy: they're counting on new technology to spark the rebirth of one of North America's biggest oil reservoirs, which is thought by many to be empty. But Penn West thinks otherwise and wants to prove it.

We watch as the men of MGM build ice roads, cross the frozen Mackenzie River and squeeze the massive rig through narrow bridges. The risks are enormous – but the potential pay-off is mind-boggling. In Alberta, the Penn West team uses state-of-the-art equipment to drill horizontal wells. But just before hitting the pay zone, they hit a tough rock formation that chews up their drill bits...

The drilling season is short. The climate is hostile. The risks of injury are great. In a word, there couldn't be a better time to head North. So when are *you* getting your "licence to drill?"
