- Facts for your success:**
- »» Top-of-the-line documentary series on boundary-busting science
  - »» Thematic variety addresses broad audiences
  - »» Made by top production companies like Darlow Smithson and KGI

# ULTIMATE SCIENCE

**V**isionaries, dreamers, tinkerers – modern-day science has room for everyone, and today even the unlikeliest projects will find their supporters. Theories that would have been rejected as unserious just a few years ago are now being developed with passion and utter commitment by men and women who are convinced that science is the key that will unlock the ultimate secrets of our world. Many of their discoveries are taking us beyond the boundaries of traditional scientific research. Documenting their findings is the goal of “Ultimate Science.”

The “Ultimate Science” filmmakers travel the world in search of brilliant minds working on often mind-blowing projects. In “City under the Sea,” for example, plans are being made for an undersea colony off the coast of Florida. We leave the depths of the sea for outer space in “Finding the Next Earth,” an episode that details the

search for a planet similar to our own. Disasters of various kinds are examined in the light of recent technological advances, such as in the episode “Man-Made Disasters,” which asks if we ourselves are not responsible for many of the so-called “natural catastrophes” that befall us. “Alien Fireballs” represent genuine, non man-made threats – but also bear precious testimony to the origins of our solar system. “Ultimate Science” also features historical programs on fascinating discoveries such as the “Star Clock B.C.,” a box found at the bottom of the Aegean and containing a mechanism whose secret took 100 years to unlock. Humor is also not lacking, as we can see in “Make Me Superhuman,” which shows how human power can be greatly enhanced by “exoskeletons,” and in “Shackleton’s Whisky,” which tells the story of the great explorer’s most successful expedition to Antarctica – and of the whisky he left behind..

Each episode of “Ultimate Science” has been comprehensively researched by renowned specialists and produced with eloquent graphs and CGIs, expert commentaries and a compelling selection of historical and specially produced footage.

## Factual Series

**Produced by:** KPI, Lone Wolf Documentary Group, Darlow Smithson Productions, Talkback Thames Productions, TV6 Ltd and others for : National Geographic Channels  
**Producers & Directors:** Ted Poole, Ryan Miller, Kirk Wolfinger, Jo Locke, Mike Slee, Martin O’Collins and others
